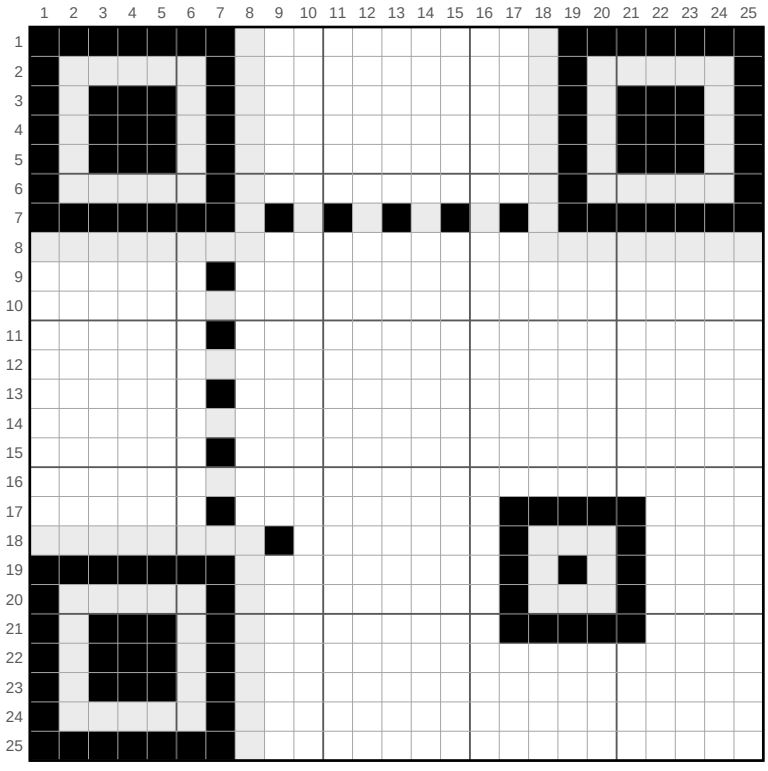
08	_____	20	_____
09	_____	21	_____
10	_____	22	_____
11	_____	23	_____
12	_____	24	_____

HOW TO USE THIS CARD

- **Write** the 24 words from the phone in order, one per line. Print clearly and check each spelling against the phone.
- **Never** photograph, scan, type, copy-paste or store a filled-in card on any computer, phone or cloud. Nothing on this card is ever entered anywhere but the phone itself.
- **Two copies,** kept in two separate safe places (think fire, flood and theft). Anyone who reads either copy controls the wallet.
- **No passphrase here.** If you add a passphrase, it is not on this card: store it separately. The words alone open a different, empty wallet.
- **SeedQR grid:** optional. On the phone: Security > Show as SeedQR. Fill every dark square; the black and grey squares are pre-printed and are the same in every code of this size. It encodes the same 24 words, so it is just as secret.
- **Check it** every few months: Security > Check my backup asks for 3 words from this card. It takes two minutes.

SEEDQR (OPTIONAL) · COMPACTSEEDQR · 25 × 25



Phone Vault backup card (A4, 25×25 grid). SeedQR format: SeedSigner specification, github.com/SeedSigner/seedsigner/blob/dev/docs/seed_qr/README.md. This template carries no wallet data and is identical for every user.
